### **EXECUTIVE SUMMARY**

This report highlights research funding at the University of Missouri using data provided by the National Science Foundation (NSF). More specifically, it examines research funding at the public AAU institutions

## **ORGANIZATION**

The report has been organized into the following sections:

Section I: Federal Research Expenditures (Tables 1–5)

### SECTION I: FEDERAL RESEARCH EXPENDITURES

The federal research expenditures reported in this section include expenditures classified as science and engineering (S&E) research and development (R&D) funds. When trend data are examined, increases or decreases in funding are noted from 1990 to 1998 and from 1995 to 1998. In addition, a definition of *federal research expenditures* is provided in Section IV: Definitions and Technical Notes.

#### **Federal Flow-Through Expenditures**

Beginning in 1996, federal research expenditures for the University of Missouri include federal flow-through expenditures. Originating from a federal agency, these expenditures have been awarded to industry, state agencies in Missouri, foundations, or another college or university and then passed on to the University of Missouri. The University has typically classified these expenditures based on the intermediary (i.e., industry, etc.). In 1996, however, the University of Missouri began classifying these expenditures based on their original source, the federal government. Consequently, the increase in federal research expenditures in fiscal years 1996, 1997 and 1998 for the University of Missouri can be partially attributed to this NSF-accepted classification method.

Please note that annual totals in research expenditures for FY1996 and FY1997 were retroactively changed in 1999. Consequently, these revised totals will not match previously published figures for these two fiscal years.

#### Table 1:

#### Public AAU Institutions: Trends in Federal Research Expenditures

Table 1 shows the trend in federal research expenditures for the public AAU institutions and the four campuses of the University of Missouri. Percentage increases in funds are displayed since 1990 and 1995.

- On average, federal research expenditures at the University of Missouri have increased 39% over the past three years and 97% over the past eight years. This compares to an increase of 9% and 54%, respectively, at the public AAU institutions.
- Since 1995, the University of Maryland, the University of Colorado, and the University of Florida, in
  that order, have made the most significant percentage gains among the public AAU institutions. There
  were nine public AAU institutions that did not show increases in federal research funding from 1995
  to 1998.

| Institution                                  | 1990         | 1995    | 1996    | 1997    | 1998    | % increase since 1990 | % increase since 1995 |
|--|--------------|---------|---------|---------|---------|-----------------------|-----------------------|
| U of Maryland-College Park                   | 66,410       | 94,071  | 99,688  | 102,928 | 129,198 | 95%                   | 37%                   |

# Table 3: Public AAU Institutions: The University of Missouri's Rank in Federal Research Expenditures

Table 3 ranks the public AAU institutions in terms of federal research dollars secured in 1990 and 1998.

• The University of Missouri ranked 28<sup>th</sup> among the 32 public AAU institutions in 1998. This is one position better than its 1990 ranking (29<sup>th</sup>).

# Table 4: Distribution of Federal Research Expenditures by Field

Table 4 displays the federal research expenditures by discipline area for the University of Missouri and public AAU institutions.

- In 1998 the majority of federal research funds expended by the public AAU institutions were in the life sciences (52%) followed by engineering (16%), the physical sciences (13%) and environmental sciences (7%). The remaining disciplines accounted for 12% of the expenditures.
- Eighteen of the thirty-one public AAU institutions in 1998 (not including the University of Missouri) relied on one disciplinary area to provide the majority of their federal research expenditures. In every one of these cases the discipline area was life sciences.
- Where Columbia and Kansas City secured 70% and 80% of their federal expenditures from life sciences, respectively, Rolla garnered 69% of its federal funds in engineering and St Louis received 32% of its federal funds in physical sciences and 32% of its federal funding in life sciences.

#### Table 5: Market Share of Federal Research Expenditures within Each Discipline Area among the Public AAU Institutions

Table 5 displays each public AAU institution's market share within the eight discipline areas. The University of Missouri's federal research expenditures from the four campuses has been pooled.

- The discipline areas where the University of Missouri had secured the most significant market share were in psychology (3.0%), social sciences (2.4%), life sciences (1.6%), and engineering (1.3%).
- Market share leaders in each discipline area were: Pennsylvania State in engineering (11.7%), the University of Texas in the physical sciences (12.9%), the University of Colorado in environmental sciences (19.1%), and the University of Illinois in math and computer science (20.6%). In addition, the leaders by discipline area included the University of Washington in life sciences (9.5%), UW Madison in psychology (13.1%), and the University of Maryland in the social sciences (15.0%).

# SECTION II: RESEARCH EXPENDITURES FROM INDUSTRY

#### Table 6:

#### Industry-Sponsored Research Expenditures

Table 6 shows the growth in industry-sponsored research expenditures for the public AAU institutions from 1990 to 1998 and from 1995 to 1998. The institutions are arranged in descending order based on their level of growth in dollars since 1995. Please note that a definition of *industry-sponsored research expenditures* is provided in Section III: Definitions and Technical Notes.

- Over the past three years, the University of Texas, Ohio State University, and UC San Diego have shown the largest gains in industry-sponsored research expenditures among the public AAU institutions.
- The institutions that lead the public AAU group in terms of industry-sponsored research are Pennsylvania State University (\$63.3 million), Ohio State University (\$40.4 million), and the University of Washington (\$38.4 million).
- The University of Missouri secured \$6.5 million in industry-sponsored research expenditures in 1998.

# SECTION III: RESTRICTED AND UNRESTRICTED RESEARCH EXPENDITURES

Universities hav

# Table 7: Restricted and Unrestricted Research Expenditures

Table 7 shows the restricted and unrestricted research expenditures for the public AAU institutions. These data originate from the IPEDS-F (Finance) annual survey and not from the NSF survey.

- The University of Washington (95%), UC San Diego (91%), and the University of Colorado (91%) received the highest percentage of restricted research funds among the public AAU institutions. The public AAU institutions average 80% in restricted research expenditures.
- Fifty-five percent of the total research expenditures at the University of Missouri were restricted in 1998. This would rank the University 30<sup>th</sup> among the public AAU institutions in terms of the percentage of restricted research expenditures.

# Table 8: Sources of Research Expenditures

Table 8 shows the sources of research expenditures for the public AAU institutions. The institutions are arranged in descending order, based on the institution's percentage of research funds that are provided by the federal government.

- The University of Oregon, University of Pittsburgh, and University of Washington received over 75% of their research expenditures from the federal government, ranking them at the top among the public AAU institutions.
- Among the thirty-two public AAU institutions, the University of Missouri would rank near the bottom in terms of the percentage of research funds it receives from the federal government.
- The University of Missouri funds a higher percentage of its research program (42% to 50%,
